Address			
Address cont		Postcode	
email		Contact Person	

VoIP subscribers should be aware that when the Internet connection becomes unavailable due to power or ISP network outages, their SIP trunk service will become unavailable. If this is mission-critical, you should install an Uninterruptible Power Supply to run your modem, router and handset during a power outage.

Please select either (a) Outright handset Purchase or (b) Rental (click the blue links to see images, descriptions)

Glossary of terms & supplementary features description/restrictions

VoIP , SIP-Trunks, VoDSL, nomenclature

For the purposes of this document, any reference to Voice-over-IP (VoIP) or SIP-Trunks, or Voice-over-DSL (VoDSL) are all taken to refer to the process of delivering G711 and/or G729 voice channels over an Internet Protocol (IP) service.

CALL BARRING OPTIONS

There may be charges related to selected barring level/s. Restricting of international calls is recommended.

SERVICE AVAILABILITY

As the VoIP Services ordered above are borne over an Internet bearer, it is understood that when the Internet Service suffers any outages, restrictions or interruption, the VoIP services will similarly be affected. To prevent loss of service during a power outage, Customer Premises Equipment should be connected to an Uninterruptable Power Source (UPS). **In the event that you require your calls to be temporarily Diverted during an internet outage, please call out Support Centre (07) 3623 0800.**

TOLL FRAUD PREVENTION

The onus is on the Users of the Phone to guard themselves against Hacking and Toll Fraud. Hacking of SIP/VoIP services is becoming more prevalent in Australia. Hackers may attack the services in a number of ways (a) By assuming the identity of a SIP Device or User Profile on the Phone System, (b) By assuming the Registration Identity of the SIP-trunk itself, (c) by dialing into the Voicemail and forwarding/transferring calls externally, (d) several other ways. Preventative measures that include secure password access and outbound call control are the minimum acceptable measures that the Phone System users should have in place.

INSTALLATION :

This is a Self-Installable product, and is shipped to you completely programmed and ready to plug into your internet service as a working product. **Should you require Technical assistance, we are happy to provide a Technician on a chargeable basis (\$80 callout Brisbane area, + \$30 per 15minute block on site)**

CAVEAT

Internet – Voice-over-Internet services will only ever be as reliable as the internet connection itself. Data/Signals sent over the internet are only as reliable and secure as the internet connection is able to guarantee.
